

BOMAT

**Customised processing,
scheduling,
perfect results.**

BOMAT has been working professionally and has developed its expertise in the metallic bending production field using copper, aluminium, iron and steel since 1992.

It produces components for refrigeration application, air conditioning, heating, heat pumps, heat exchangers, solar thermal

system, coffee machines and pipes for liquids and gases in general. The company, thanks to its vast experience, to cutting-edge equipment and to its highly qualified personnel, is able to grant high-quality standard according to ISO 9001. The technical department is able to offer a valuable customer service since the very first steps of the design of the product, analysing and offering solutions aimed at optimizing the production and the cost reduction.

Processing

- Serpentine coils / 3D Serpentine coils
- Bended pipes
- Heat exchangers
- Sheathed pipes / Pipe evaporator
- Header / End forming pipes processing
- Assembling / Brazing and welding
